OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Pink	4/17/96			No	<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Stream observed during ADF&G, Habitat and Restoration Division's, participation in Forest Practices inspections of Eyak Corporation's timber harvest operation. As currently depicted in the Anadromous Waters Atlas, this cataloged pink salmon spawning stream (see attached map) descends a slope exceeding 50 %. I have viewed the stream from the road crossing shown on the map and believe it highly unlikely that pink salmon ascend the stream as far as the road. My observations of the stream from the road looking down to the shoreline of Simpson Bay and from the shore of Simpson Bay at the mouth of Raging Creek suggest that the limit of pink salmon distribution is approximately as shown on the map.

Check original nominations to determine if chum salmon should be added to stream

Name of Observer (please print)

Michael Wiedmer, Habitat Biologist

Date: 12/18/96
